What to look for in California King Leaves material When buying leaves, be sure to look at the material from which they are made. Cotton leaves are known as airtable and easy to care for, while flannel leaves are warm and cozy in winter. Polyester or microfiber sheets are often cheap, but do not last that long, and linen sheets are quite expensive, but can be used for years if taken care of properly. The best choice depends on your priorities. Weave Most leaves are made of woid fabric (except knitted jersey leaves), and the type of weave will affect how the sheets feel, as well as their longevity. Perch binding results in a thicker and sharper fabric that is easy to care for, while satin bindings are a little softer but more prone to crushing. Depth When buying sheets for your Californian double bed, pay special attention to the depth of the pocket on the snug sheet. Many large mattresses are deeper – sometimes 16 inches or more – and you'll want to make sure your sheets have a pocket that fits comfortably at this depth. Otherwise, they can fit badly and fall off the mattress. Incident number: Error_Unknown_Product Error occurred while processing your request.
